Virtual private servers

Private server, shared hardware

What is a Virtual Private Server? Sometimes referred to as a Cloud Server, a Virtual Private Server is your own private server, running almost any Operating System of your choice on shared pooled resources and infrastructure.

A Virtual Private Server offers your business fantastic flexibility of computing resources. Provisioned very quickly and built on an N+1 underlining hardware architecture to ensure absolute minimal downtime. The flexibility to increase RAM or CPU cores at any time to any Virtual Machine means a Virtual Private Server can quickly and easily scale to suit your business or application needs.

	VPS entry	VPS standard	VPS advanced	VPS enterprise
Linux (pm)	£29.95	£49.95	£69.95	£89.95
Windows (pm)	£34.95	£54.95	£74.95	£94.95
CPU power	★★★	★★★★	★★★★	★★★★★
Disk power	40GB	60GB	80GB	100GB
Memory	1GB	2GB	3GB	4GB

Features

- **Dedicated resources**
Dedicated resources on shared physical infrastructure allocated to your virtual server
- **High availability as standard**
Unlike many cloud operators, we build into our offering High Availability as standard
- **Live storage resilience**
Our storage SANs are constantly backing up data between multiple nodes, enabling high availability and automatic failover
- **Flexible resourcing**
Only pay for the resources you need
- **Firewall protection**
We provide Firewall protection as standard (if required)
- **CDP backup compatible**
All our cloud offerings are fully compatible with our Continuous Data Protection Backup solutions, ask us about this if required
- **Choice of operating systems**
Choose from a vast array of OS which include Windows Server, Redhat Enterprise Linux Server, Novell SUSE Linux Server, CentOS Linux to name but a few!
- **Install additional 3rd party software**
As the Virtual Private Server is dedicated to you, you can (subject to correct licensing) install 3rd party software and applications as and when you need them

Benefits

- **Lower TCO**
No capital expenditure or outlay means you can buy computing resource for the duration of your project
- **Pay as you need pricing**
Need more RAM or CPU power, simply increase the resources allocated and pay for the extra resources as and when you need them
- **Maximise business productivity**
Our High Availability Design ensures minimal downtime which means maximum productivity for your applications and business
- **Increase staff productivity**
Not having to worry about Hardware & OS management means your IT staff can concentrate on your IT applications

What Elite does for your virtual private server

- Full support of the operating system running on your Virtual Machine
- Provision your Virtual Machines
- Manage and support the configuration, hypervisor layer and infrastructure 24x7x365
- Purchase and renew all required software licenses
- Purchase all related hardware components
- Manage the network and data centre 24x7x365
- Provide industry leading Service Level Agreements
